# BATNA SINGLE BED

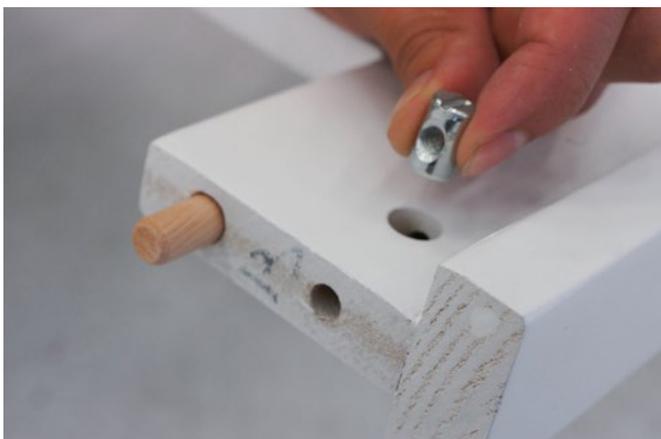

1. Kindly remove everything from the packaging and lay all the pieces side by side, then organise all the hardware parts neatly

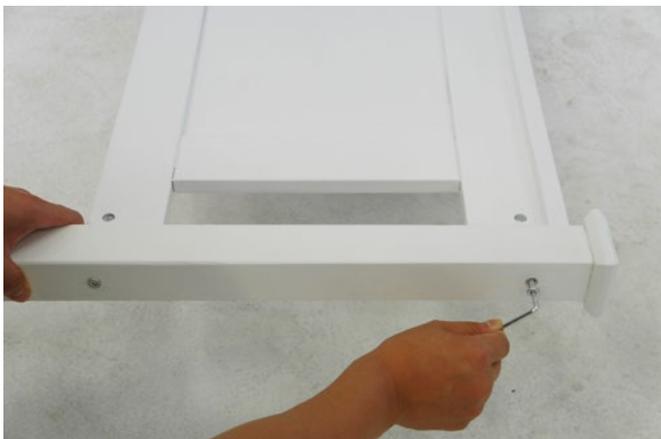

2. Gather the bed rails and at the end of the rail insert the round barrel nut into the 2 holes as shown above, ensuring the hole faces forwards.

3. Gather both the head board and footboards and inset the round barrel nut into the holes behind the panels, ensuring the holes face forwards.

4. Gently take longer bed legs and align it up with the side of the head board, then connect the two pieces together with the wooden dowels.

5. Once the two pieces are connected insert the long metal bolt through the holes on the bed legs and turn the Alan key to tighten. Repeat steps for the footboard as well.

6. Gently raise the bed rail and line it up with the constructed bed head and insert the wooden dowel either on the end of the rail or on the bed head then connect them together..

7. Insert the two long metal bolts from behind the bed head until they meet the barrel nuts in the rail and turn to tighten.

8. Gently rest the bed rail on the floor and gather the constructed footboard of bed and connect it to the other end of the rail and repeat step 7.

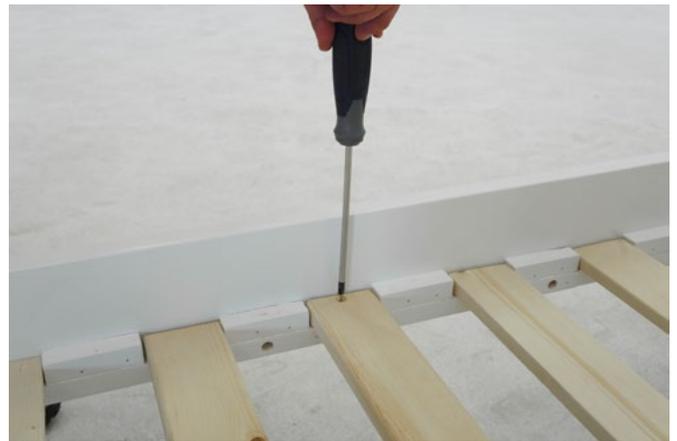

9. Once the first bed rail has been assembled, repeat the same steps of the other bed rail.

10. Once both bed rails have been assembled, carefully lay all the bed slats onto the grooves of the bed rails

11. To hold the frame of the bed in position, ensure you tighten the screws located on the slats positioned at the top and bottom ends of the bed and another in the centre.

12. Please note not all the slats are required to be fixed to the bed as long as the top middle and bottom slats are secured.
